Colours shown:

Steel model: RAL 6026

Colours can be selected from the RAL shades or other textured shades from the Akzo Nobel Futura range.

Presentation

The bicycle guard encourages the development of cycling in the city.

The bicycle guard has been designed and developed in a specific Sineu Graff eco-design approach. They have a sober design. This design has been optimised to reduce raw materials and energy to manufacture.

Description

Steel model:

The bicycle guard is made of round bent steel tubes, $\varnothing 48.3$ mm and 2 mm thick, welded with a 5 mm thick spacer.

For optimum protection against rust and long-term performance, the steel elements are zinc coated first, and go through our powder blast process (after having being cleaned and shot-blasted, the parts are coated with a primary layer of epoxy powder, followed by a second layer of polyester powder).

Stainless steel model:

The bicycle guard is made of round 316 L grade stainless steel bent tubes, $\varnothing 48.3$ mm and 2 mm thick, welded with a 5 mm thick spacer.

The bicycle guard is made of treated stainless steel, after manufacturing, by sanding.

The sealing base plates are 5 mm thick.

4 sealing points, $\varnothing 11$ mm, for the base plate version.

Delivered assembled.
