Presentation

The Garden City line is made of steel wires, using a patented SINEU GRAFF assembly system, which gives maximum strength and comfort. The transparency of the steel grille plays harmoniously with light and allows it to be discreetly and elegantly present.

The Garden City line offers 2 and 3 place seats, an armchair, 2 and 3 place benches, a low table, a lounger and a footrest.

Description

The **seatings and backrests** are made up of 2 **City type steel tubes** (50 x 40 mm thick), 8 mm diameter rods, 2 steel sheets (6 mm thick) at the ends and 5 mm thick reinforcements.

The **armrests** of the seats, armchair, benches and lounger are made of 60 x 30 mm **wood slats**.

The **legs of the Garden City seats** are made of 10 mm thick laser-cut **steel flat bars**.

The **legs of the low table and the shelf** consist of 2 uprights and of a 10 mm thick **steel plate** for anchoring.

The armrests are assembled on the legs with screws and wooden inserts, and the legs are assembled on the seatings with tamper-proof screws.

Our woods are exclusively collected in sustainably managed forests. Of high quality, they are PEFC labeled for local sourcing, FSC® labeled for exotic hardwoods, or comply with the EUTR (EU Wood Regulations).

Stained wood: after the application of a **flow coat**, the wood is coated with an aqueous, solvent-free wood stain emulsion to guarantee added protection and durability.

For optimum protection against rust and long-term performance, the steel elements are zinc coated first, and go through our powder blast process (after having being cleaned and shot-blasted, the parts are coated with a primary layer of epoxy powder, followed by a second layer of polyester powder).

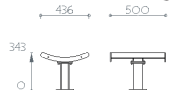

4 anchoring points.

Delivered assembled.
