1971 - 2021

The city, the hub of our personal, social and professional lives, is more than ever the dominant model in the early 21st century. The organisation of the bustling and empty spaces of urbanism is a blueprint for meeting zones where we can find a hubbub of the most contradictory characters in the city: public spaces.

We want them to be both calm and busy, sober and joyful, convivial and intimate. Because sometimes we race past like travellers in transit and sometimes we stroll around like merry tourists. But we always want the same thing: To feel happy about being in the city. Whether on foot, at the wheel or on handlebars.

The city belongs to us. This is why we all share the feeling that public spaces and their street furniture belong to us. They are part of our living space.

Much more than a simple piece of decoration, street furniture is seen as a means for well-being in the city, a real service given to its inhabitants. It's practically our right. It's a given.

We do not expect that street furniture will provide the same service in a landscaped park as on a pedestrian route. But we always want to be able to find a bench without having to look for it. Especially since the development of

soft mobility, which includes sections travelled on foot, with the consequent need for more places to take a short break.

Much more than a simple piece of decoration, street furniture is seen as a real service to its inhabitants, a means for well-being in the city. We expect that there will be enough for everyone to find their place, alone or in groups. When deserted, it's a luxury and when populated, it's a chance to meet people.

How can we imagine these public spaces without furniture that promises calm, comfort and rest? It is a tacit request and we want it to be welcoming and comfortable, with a unique aesthetic. In tune with the times as well as with its environment, which almost exclusively determines its style. So we want it to be different everywhere, like the ebb and flow of our lives.

We need a very wide and full range of designs and furnishing solutions to satisfy the naturally varied tastes of the general public and to adapt to each function and each situation. This is why we are developing and going the extra mile. For the design of all our street furniture lines, we have a threefold aim to make public spaces more aesthetically pleasing, to create a peaceful atmosphere and to promote social cohesion.

Our understanding of the objectives of cities in terms of urban landscaping means that we

can constantly offer real innovations. Useful products that fill a gap. They are better than simply new products: they are innovative products with integrated services. We believe that ensuring the well-being of the users of our urban spaces by providing more conviviality, comfort and pleasure is a basic requirement. Our true ambition in doing so is to help make cities more aesthetically pleasing - cities that appreciate our expertise, our taste and our involvement with the general public.

The secret of our expertise and our understanding of the ever-changing expectations and needs, as well as of the uses of rest and leisure furniture? Many hours spent in discussion with our clients, working closely with landscape architects and redevelopment bodies, working with designers and validating the solutions chosen with the users. This is what needs to be done for a public service. You have to think big to make the public do the same.

Stimulating city

Whether you want to train, have fun or simply stay fit and healthy, sport is so much more enjoyable when it is free. Cardio, fitness and weight training apparatus have been springing up in green areas all over France and the rest of the world over recent years. A vibrant city will do everything it can to make it easy to access a wide range of physical activities free of charge. The new apparatus are accessible to everyone and adapted to suit a wide range of requirements.

Thanks to these innovations, local councils are encouraging people to keep fit to

promote their well being or to get involved in more advanced sporting activities. All these new activities combine to create the image of a dynamic city where every generation can enjoy equal access to equipment which is the most adapted to the requirements and possibilities of every individual: children's games, multisports ground for teenagers, fitness classes for older people.

This new type of apparatus which is accessible to everyone marks the start of a new era in free individual sport in public spaces.

You can get active wherever and whenever it suits you regardless of whether you are young, old, small, tall, slim or stocky. Alone or in a small group. It depends how I feel. Preferably outside... but without having to worry about the weather. The ideal scenario is to play outdoor sport under a shelter with lighting for maximum security, which is doubly appreciated at night. The modern multi-purpose shelter created for both sports specialists and welcome novices is called: MOUV'ROC®.

MOBILE GARDENS
Tremblay-en-France - France

Green city

The main benefit of urban vegetation can never be taken away: namely its natural beauty. It needs no alibi other than its obvious charm to justify its luxurious presence at the heart of the city which without it would be purely mineral.

Plants and flowers are attractive by their very essence but also offer many other advantages which offer a whole range of benefits for urban Homo sapiens of the 21st century.

Not only are they pleasing to the eye thanks to their aesthetic perfection and the colours

that adorn their foliage, they also set the tone for the landscape with their height differences by playing on the distinct heights of façade openings.

And this tiny detail creates a very relaxing effect. If we take a closer look we will see that the fresh foliage is not only interspersed with flowers, but also provides shelter for a little colony of insects who are delighted to be part of our world.

Flowering structures like Steel Garden which emerge above ground outdoors will appeal to us as lovers of this new-found link with the

very essence of life. It goes without saying that urban plantations capture CO₂ and play a major role in reducing the temperature. We know this and have always known it instinctively.

This is why we love to feel in contact with the ground when surrounded by the backdrop of the city. The world that lies at the heart of all of us is green.

Encouraging nature back into the city

The Refuge® Bench is meant to have a direct, local, visible impact on biodiversity. Different species of insect, such as chrysopidae, ladybirds and anthocoriadae can settle, flourish and reproduce in the substrates placed in the compartments, providing a source of food for the little insectivorous birds that have found their home in the nearby surroundings.

Putting the world to rights in a public space

LINK FURNITURE
Strasbourg - France

Intimate city

We love the city for its bright colours and the hectic pace of life created by the huge range of activities on offer. But even though we deliberately seek out pleasure in the city, we can soon become lost in the crowd. It is therefore a vital luxury to be able to enjoy time alone in the heart of the city. It is high time that we pressed the pause button. Here we find empty space, devoid of all noise and all shouting. Here the city's soundtrack seems to have been cut by an invisible benevolent hand. The volume has been turned down. The tempo has been reduced. We inhale. We exhale.

We are elsewhere. It is as though we have escaped through a gap of greenery between the stone and the concrete. Would we stay for a few minutes or hours sitting on a hospital seat? Difficult to say based on our own feelings. Time is standing still. But this little parallel world that we have been sucked into its moving. Passers-by move along in a colourful but slow and silent procession. The more athletic ones are doing intensive exercises on the apparatus. But all activity here is calm. This is how green areas and public spaces can open up a new dimension.

The city turns into a village. Away from the crowds we regain our identity. We become visible again. The words we share are different from those exchanged in the flow of urban pedestrian traffic. They are more friendly, relaxed words. We are outdoors. Away from the city's bells and its coded messages. Here the city sits down and finally takes a rest from its own movement. And weaves together social connections from some healthy recreation.

**No littering in the
natural environment.**

Clean city

We can exist in society if we behave in a way that others expect of us. A city in which every inhabitant works together to keep it clean would not be a sterile environment but a little paradise. We would at last emerge from the Middle Ages where we are being held by the waste and rubbish which are carelessly scattered on the asphalt.

This does not mean that litter bins have to be flashy. The majority of people like them to be discreet and integrated in the surroundings as they can spot them instinctively. Anyone who is aware of their civic duty will be aware of their presence in any case.

In an ideal 21st century, all public spaces would be designed to be shared spaces.

Share by everyone. They would be havens where people could live together. In terms of cleanliness, all city dwellers would fulfil their civic responsibilities thanks to resources provided by the local authorities. This would enhance the comfort of everyone, not least their own. That day will come and will bring with it new sensations. We all experience a sense of order, calm and security at the sight of a tidy litter bin which had been overflowing with waste the night before. The whole world seems more healthy. It is looking after us. New tools are currently being developed which enable us to make rapid progress in this direction and which bring ecology into everyday life through digital technology to promote civic-mindedness. Interactive.

It is all there.

A simple telephone number is all that is needed to report that intervention is required so that the environment can be cleared up more quickly by users and the cleaning services' duties can be streamlined more easily. We would like to tell those who believe that this day will come when the rubbish bins are full of fleas that it has come already. Modern litter bins are able to indicate when they need to be emptied. This system exists and has been created by Sineu Graff. The future can begin.

The patented underground tank system

JUMBO

Patented system

1 Litter bin = **750L** capacity

Adjustable suction flap

The suction flap is made from galvanised steel. It is non-slip and fitted with an automatic stainless steel lock.

Buried part

A litter bin

Litter bin attached to the Jumbo® with an anchoring ring. Other models which can be adapted to the cleanliness system are available.

Adjustable anchoring ring

Made from galvanised steel.

“Workers would like to see Jumbo® everywhere, as there would be no more in contact with bags (and therefore waste) and no time wasted changing bags...”

M. GARCIA - Marseillan - France
General Manager of technical services

A Jumbo®

The Jumbo® is a 750 litre buried watertight container made from galvanised steel. It is fitted with four handling rings.

The digital platform for advanced “i” management

These applications may be implemented progressively or independently.

Through this “i” platform, Sineu Graff hopes to provide urban cleanliness service managers with management, coordination and optimisation tools for their service level.

The aim of Sineu Graff is to provide cleanliness services in cities and metropolises with the most suitable tools based on NTIC and connected items: “IoT” intended to facilitate and enhance the effectiveness of waste collection in urban areas, to assist them in the management and maintenance of their containers and provide them with the necessary statistical and historical information and items to improve their performance and enable them to make the best decisions.

This is why we have developed “i”, the advanced digital management platform which can be implemented quickly and very easily in hosted mode.

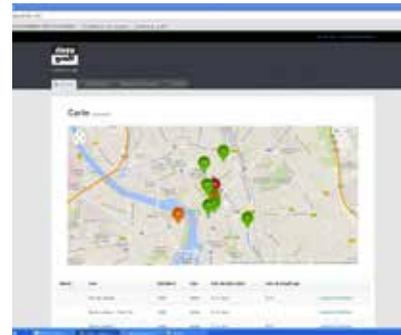

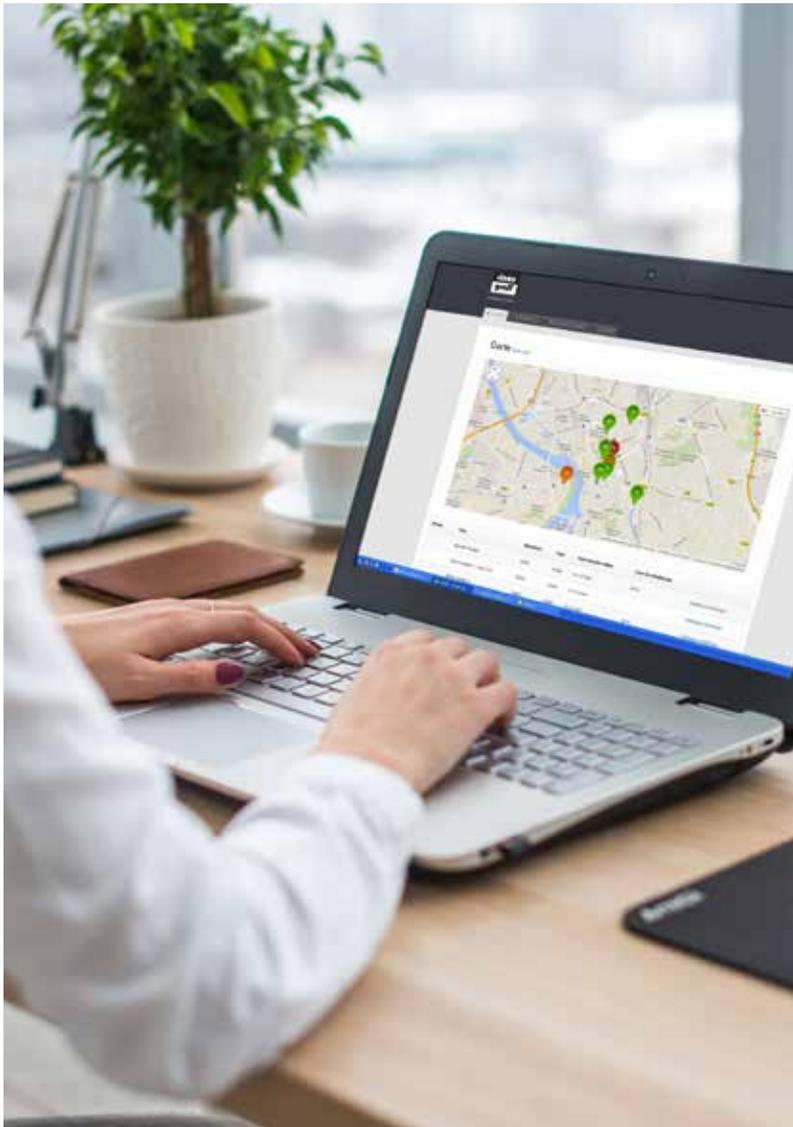

This advanced digital management platform for urban cleanliness provides the following applications:

- **i-localisation** : database for the identification, geo-tracking and management of cleanliness furniture.
- **i-collect** : application intended to record and date information relating to the quantity of waste collected in litter bins using dedicated mobile terminals.
- **i-jumbo** : application intended specifically for the management of collection and the optimisation of routes for our large volume Jumbo® containers as connected items.
- **i-maintenance** : maintenance management application for furniture from the detection of faults on site by mobile terminals or direct input until repairs are carried out.
- **i-stat** : historical and statistical data processing application for data recorded during collection, intended to provide operators with decision-making tools and to assist them in managing their service level.

A data processing platform “i” which hosts advanced applications

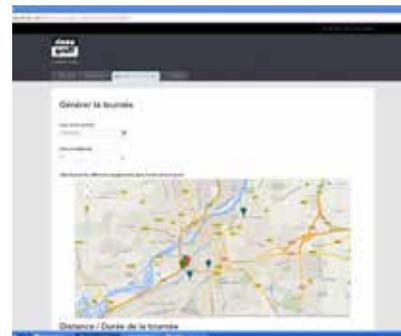

I-APPS

THE AVAILABLE DATA

The “i” platform records all the data relating to the litter bins

- > Positioning of furniture
- > Filling rate, emptying time, maintenance data, etc.
- > Type of equipment installed

DATA PROCESSING

- > On the basis of this information, the platform proposes and alter and alarm threshold. These thresholds can be configured by the local community.
- > The platform can also generate an optimised collection round based on different parameters modulated by the local community.
- > The generated round takes into account the filling rate, the departure and arrival points and a collection point.

EXPLOITATION OF RESULTS

- > The platform can also be used as a statistical tool. At the end of each round, the data relating to the round is entered in the database so that it can be analysed and the plan can be refined.
- > A decision-making tool: optimisation of exploitation, distribution of containers throughout the area, future investments with the aim of improving the quality of services provided to users.

Once the system has been configured by Sineu Graff, the manager operates autonomously on the “i” platform:

he/she may create different user accounts, define the area in several zones, configure the alarm and alert thresholds and amend them according to different events organised by the city.

To find out more
Visit our website:

This tool is used to improve and optimise the management of collection and cleanliness furniture by exploiting the data collected. In principle each item of collecting furniture regardless of its type is identified by an RFID tag which is listed and geo-tagged in the operator's database.

The operator on a collection round collects information in a simple, instant manner on a mobile terminal relating to the volume collected and the time of collection for each item of furniture identified by its RFID tag. At the end of the round, this information is compiled in the "i" digital platform and access is granted to different applications and statistics in order to enhance the exploitation of the service provided and inform users if applicable.

Similarly, inspection rounds are carried out in order to identify furniture which requires maintenance or repairs to ensure that the collection furniture is always kept in perfect operational order.

Benefits

Providing an better rate of service and improving communication with users.

Statistical data relating to filling rates

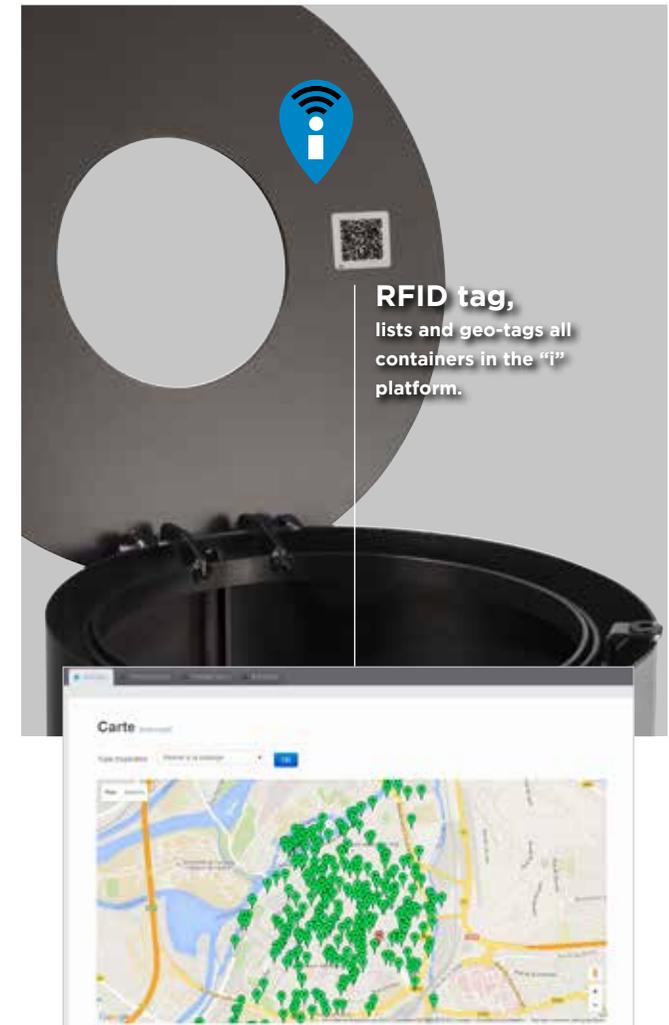

The statistical analysis of emptying dates and filling and location rates can be used to adjust collection rounds and to decide whether furniture with a larger volume is required, the position of a litter bin needs to be changed or the number of collections needs to be increased or reduced in order to provide a better service rate.

Statistical data relating to maintenance

Maintenance data, when compared with the characteristics of the litter bin, can be used to identify and quantify the number of interventions on a model and thus calculate its overall operating cost: acquisition, installation and maintenance. Investment in new litter bins can therefore be made on the basis of rational data: overall cost, which may also be associated with an area and a service rate.

RFID UHF reader or smartphone

- Excellent reading performance: Up to a distance of 1 metre
- Waterproof model
- Resistant to dust and dirt
- Easy to use for agents wearing gloves, direct manipulation on screen.

RFID tag,
lists and geo-tags all
containers in the "i"
platform.

Optimise your collection with “i”

I-APPS

OPTIMISE YOUR RESOURCES

With the “i” applications, the local community improves its organisation by involving the collection team on the basis of actual data rather than systematic frequencies.

OPTIMISE SERVICE QUALITY

Having access to the filling rate for containers allows you to anticipate the collection rate to guarantee optimum service availability of the cleanliness furniture.

OPTIMISE YOUR ANALYSES

The information collected by “i” applications contributes to the analysis of the city’s cleanliness. This factual data is used to create a cleanliness system for your city.

OPTIMISE INFORMATION QUALITY

Receive information linked to the collection of all containers in real time: Date and time of collection, filling rate, etc. This information is more comprehensive than the simple declaration.

OPTIMISE YOUR ACTION FOR SUSTAINABLE DEVELOPMENT

The “i” applications will enable you to save time and limit travel: this means that you will consume fewer resources and therefore produce less greenhouse gas.

CAST IRON BOLLARDS
Osny - France

Safe city

You sometimes get the impression that the posts, barriers and bollards are doing everything they can not to be noticed. They are playing the invisible man or the chameleon. Yet we know that they play an essential role in providing essential landmarks for the safety of pedestrians and the growing numbers of other road users. So these posts, barriers and bollards are not necessarily obvious but they do work - in fact they work very well. Traffic flows smoothly as well, whether you are travelling by car, scooter, self-balancing scooter or

pushchair! The role of street furniture in managing traffic is something of a magical phenomenon. Channelled flows seem to distribute and regulate themselves, so great and almost intuitive is public awareness in terms of the role of street furniture in the management of urban traffic.

Everyone understands immediately what they need to do often without really paying attention to it. It seems automatic. And spaces naturally become more homogeneous. The calm discretion of

security furniture is what helps to protect us without causing alarm and shields us from any anxiety or stress. Posts, bollards and barriers are strategically positioned and are never aggressive. Instead they are reassuring and sometimes even pacifying. Everything from the design to the choice of materials and colours has been created to provide an ideal balance between a discreet item such as a pavement and a clear sign such as a red traffic light. Urban totems.

Imagining the city of the future

SEAT WITH LEDS
Templeuve - France

Ingenious city

An attractive city which is pleasant to live in has a soul. Its street furniture should add to this through a subtle interplay of shapes, materials and colours which make it clear and visible since it is highlighted and its aesthetic coherence reflect the urban planning policy. The skill lies in being able to express the style of the city whilst also affirming the personality of each of its districts. This is underpinned by a unified movement which provides a tailor-made response to the inhabitants' expectations.

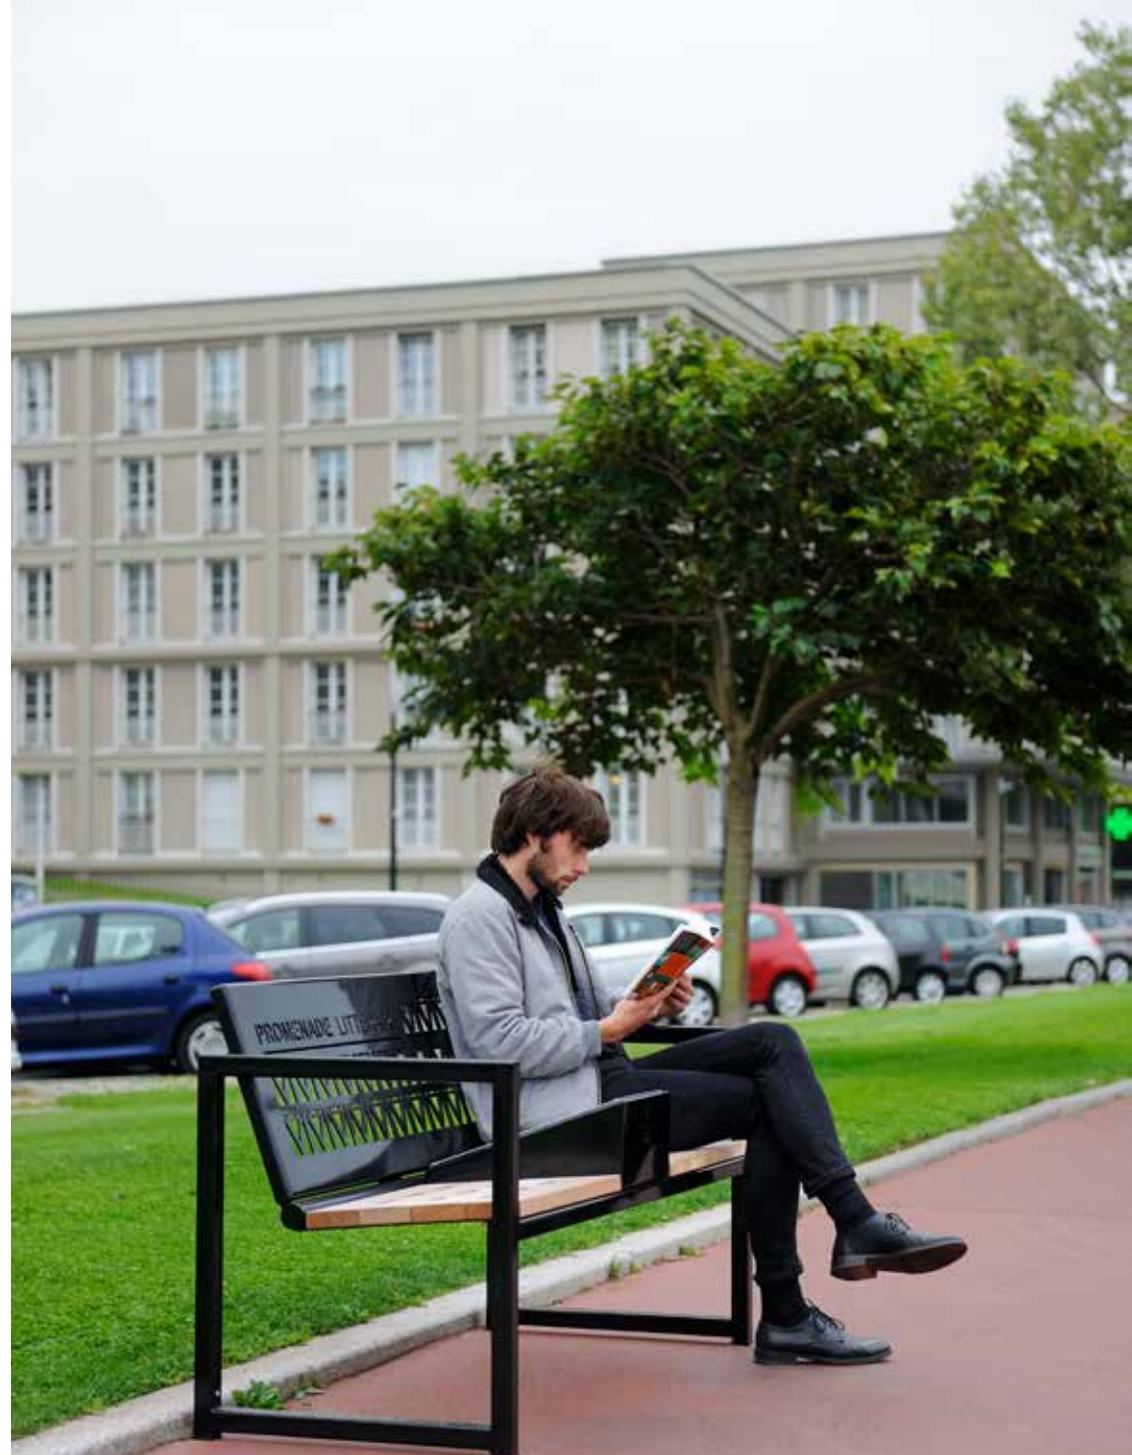

The harmonious association of different types of furniture reveal the city's style where aesthetics and practicality meet and where the design unfolds. Its peaceful aesthetics can be defined as a skilful, highly sought-after harmony of plural aesthetics. An effectiveness test will suffice: the time spent by inhabitants and tourists walking. You don't count your steps in an attractive city. You are happy to devote time to it as it is an object which inspires curiosity and a desire for surprises.

The public space has changed a great deal due to the development of public transport and the emergence of environmentally friendly modes of transport. We are on foot more and more and simply want to become walkers. The fundamental dynamism and image of a city which presents itself as a landscape are inevitably enhanced. This energy enhances its attractiveness. A virtuous circle has just been created.

DEVIS / CONTACT

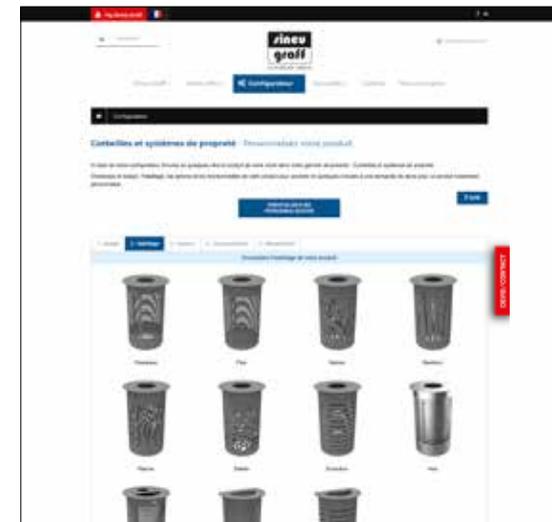

Select the product category

Discover all groups of street furniture which, when combined, make the city more human, more lively and more natural.

Select the design and the range

You will find the same wide range of designs and styles everywhere. Every district of a city has its own personality and, like every company, its own brand image. Configure yours!

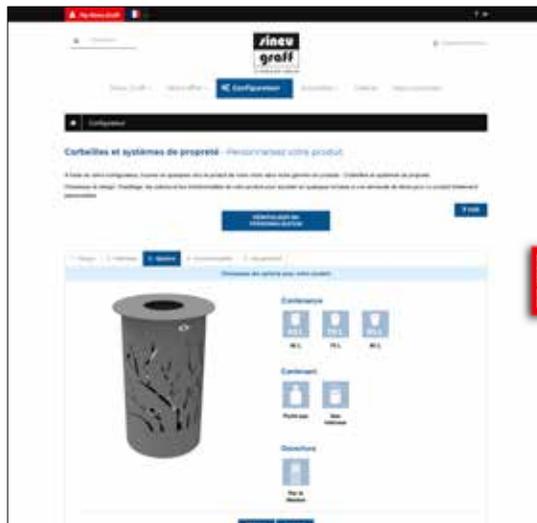

Select the pattern

The pattern is the first impression we have of furniture which is meant to be discreet whilst knowing how to stand out.

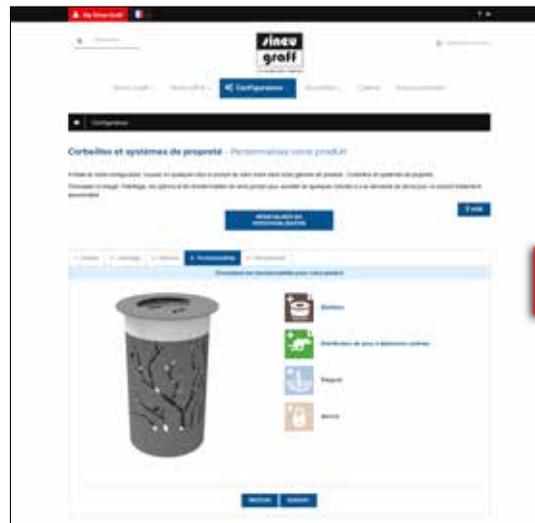

Artificial intelligence?

CONFIGURATOR

► Select the options

A seat with armrests. A litter bin which opens from the top? A tree grille with a reinforced frame. These are the details which reflect the know-how.

► Choose your fonctionnalités

You will be surprised to note that we have thought of everything. Accessories such as the cigarette snuffer for litter bins have been invented by observing daily life.

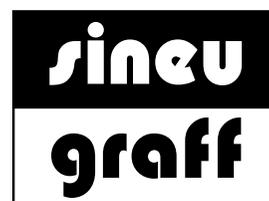

► Get a quote and place an order

All your furniture items have been reviewed and carefully selected. The prices will be calculated as accurately as possible.
